Male Circumcision Campaign

In August, Odenwald Clinic successfully conducted a **male circumcision campaign**, led by **Nurse Ngarambe Kazungu,** a seasoned professional with over **20 years of experience.** During this initiative, we provided **circumcision services to 64 patients**, addressing a crucial healthcare need within the community.

Circumcision is widely recognized for its role in reducing the risk of **sexually transmitted infections (STIs),** contributing to overall public health. Given the high demand and positive impact of this campaign, we plan **to organize similar initiatives in the future** to ensure more individuals can access this essential service.
